Date : 16 June 2026

Student : Lee Jing Yuan

Dear Sir/Madam,

Letter of Recommendation for Lee Jing Yuan – Early Admission Exercise (EAE), Singapore Polytechnic

I am writing to express my strongest support for Lee Jing Yuan's application for early admission to Singapore Polytechnic through the Early Admissions Exercise (EAE). He is applying for the Diploma in Electrical & Electronic Engineering, the Diploma in Mechanical Engineering, and the Diploma in Mechatronics & Robotics. Having coached him over the past four years in my professional capacity with Tribal Studioz, I have witnessed his remarkable growth both as an individual competitor and as a collaborative team player. He consistently demonstrates exceptional technical aptitude, innovative problem-solving, and a genuine passion for engineering and technology.

Jing Yuan has actively represented his school in prestigious national and international robotics competitions, achieving outstanding results. His notable accolades include:

- **World Robot Olympiad (WRO) RoboMission Junior 2025 (National):** Champion, Best Robot Performance, and Side Quest 4 Winner.
- **World Robot Olympiad International Finals 2025:** Silver Medal – representing Singapore on the global stage.
- **FIRST LEGO League (FLL) Challenge 2024/2025:** Champion and Best Robot Run—subsequently invited to the International Championship in Houston, Texas.
- **World Robot Olympiad (WRO) 2024:** 7th Place Nationally.

Through these rigorous competitive experiences, Jing Yuan has developed robust programming skills across multiple platforms, including block programming for EV3 and SPIKE, Python via PyBricks, and C++. Notably, he played a key role in developing a PyBricks template that was adopted by all junior members of the CCA, requiring extensive testing as one of the first pioneering students on the team to utilize the platform.

Jing Yuan also made significant contributions to the development of EVO, our custom robotics microcontroller platform. He independently wrote foundational movement functions, including PID straight movement and spot turns, assisted in servo library development and testing, and conducted rigorous hardware stress testing and code reviews to identify and report bugs. Furthermore, he designed and 3D-printed over 50 functional custom components using TinkerCAD, demonstrating a strong grasp of physical tolerances, mechanical design, and iterative prototyping. Beyond his own technical tasks, he actively mentored junior members in both programming and building, contributing meaningfully to the sustainable growth of the CCA.

What truly sets Jing Yuan apart is his analytical mindset and resilience. When faced with complex engineering bottlenecks, he approaches them systematically—iteratively testing and refining his designs to achieve optimal performance. His ability to troubleshoot both hardware and software challenges under high-stakes competition environments has made him an invaluable asset to his team. He also served as the Assistant Logistics Leader on the CCA Executive Committee, managing club equipment and coordinating complex competition logistics with consistent reliability and care.

Beyond his technical capabilities, Jing Yuan exemplifies perseverance, initiative, and an eagerness for continuous learning. His solid multidisciplinary foundation across robotics, programming, mechanical design, and electronics makes him uniquely well-suited to thrive in any of his three chosen engineering pathways at Singapore Polytechnic.

I am entirely confident that Jing Yuan possesses the aptitude, drive, and commitment required to excel at the polytechnic level. He receives my highest recommendation, and I am certain he will make significant contributions to the Singapore Polytechnic community.

Yours faithfully,

Gilbert Heng

Master Trainer
